STUDENT ID: 101180909

What we have done and learned on this lab:

- Did continuously polling on the switches with debouncing so that it responds to the button presses.
- Configure the RGB LED so it can cycle through the 8 states corresponding to off and 7 different colours.
- Disabled the Watchdog timer. Implement the startup code to configure the switches (P1.1 and P1.4) as inputs, using pull-up internal resistors and the LEDs (P1.0 and P2.0, P2.1, P2.2) to be outputs with the initialize LED states to be all turned off.
