

SYSC 3310 LAB 5

NAME: JABER-UL HUDA

STUDENT ID: 101137524

TEAM MEMBER: HASAN AL-HASOO

STUDENT ID: 101196381

TEAM MEMBER: KAIF ALI

STUDENT ID: 101180909

TEAM MEMBER: COLIN MANDEVILLE

STUDENT ID: 101140289

What we have done and learned on this lab:

- Configure the switch to respond to interrupts. This had to be done at port level.
- Configure the NVIC to receive interrupts and configure the CPU to receive global interrupts.
- Disabled the Watchdog timer. Implement the startup code to configure the switches (P1.1 and P1.4) as inputs, using pull-up internal resistors and the LEDs (P1.0 and P2.0, P2.1, P2.2) to be outputs with the initialize LED states to be all turned off.
- Toggle through the 8 states of the RGB LED corresponding to off and 7 different colours by performing bitwise clearing and setting.
- Toggle the RED LED corresponding to on and off by performing bitwise toggling.
- Used the interrupt handler function that is called by the microprocessor to implement the functionality of the switches.
