

Lab 6

NAME: JABER-UL HUDA

STUDENT ID: 101137524

TEAM MEMBER: HASAN AL-HASOO

STUDENT ID: 101196381

TEAM MEMBER: KAIF ALI

STUDENT ID: 101180909

TEAM MEMBER: COLIN MANDEVILLE

What we have done and learned on this lab:

- Configure and programming interrupts for the switches at a port level (device), NVIC, and CPU.
- Configure Timer A (16 bits) at a port level (device), NVIC, and CPU to generates interrupts using the Up mode and using the 32.768kHz clock.
- clearing the interrupt flag to service the interrupt in the interrupt handler.
- Configure the switches (P1.1 and P1.4) as inputs, using pull-up internal resistors.
- Set Button 1 to toggles between the Red and RGB LEDs.
- Turn on and off the Red LED using the Timer A (16 bits) with the interrupt handlers provided by the timer.
- Toggle through the 8 states of the RGB LED corresponding to off and 7 different colours using the Timer A interrupts.
